

ABSTRACT OF THE DISCLOSURE

An umbrella includes a pole with an axially extending wire hole, a cover, and a plurality of cover support ribs, each of which is formed with a plurality of lamp holes, 5 within each of which a lamp is mounted detachably. A main wire member extends through the wire hole in the pole. A plurality of branch wire members connect the lamps respectively and electrically to the main wire member. Each of the branch wire members is disposed between the 10 cover and a corresponding one of the cover support ribs.
